## **Wraparound Labeling System for Small Diameter Products**

This Moduline Horizontal Roller labeling system is used to apply wraparound labels to a small diameter hand sanitizer. The product labeled is 5/8" in diameter with an oversized cap.

Features include the popular Q55 top-mounted, wipe-on applicator, a top-mounted wrap station, and a 7' powder coated carbon steel conveyor.

Products are manually loaded onto the horizontal roller conveyor, aligned by the guide rails and labeled by the Q55. The top-mounted wrap wheel rotates and impresses the label around the product.

This system is ideal for unstable products and meets the needs for those requiring an automatic system at an affordable price.
