

Custom Wine Labeling System

INDUSTRY
Wine
Promotional

PRODUCTS
750 ml & 1.5 l Cylindrical
Glass Wine Bottles

APPLICATION
Over-Labeling
Front/Back Labeling

PRODUCTION RATE
Up to 35 ppm

This technically-advanced labeling system was designed specifically for wineries with challenging export business. It has the ability to 'over-label' or apply new labels directly over existing labels. This system is also capable of handling unlabeled bottles.

The system features our 3-roller indexing module which captures the product between the product rotation/label impression roller and the product capture wheels. As the product rotates in the 3-roller module, a reference sensor locates the existing label on the bottle; once the location is known, a programmable logic controller signals the labeling head to dispense a second label in the correct position. The label is impressed by the product rotation/label impression roller.

System features include Allen Bradley PLC control, high speed stepper driven labeling heads and stainless steel construction.
